

Western Weather Group's Lodi Wine Country Frost Forecast

Meteorologist, Tom Cushman

Tuesday March 20, 2018 issued 2:00 pm

Highlights: Cloudy, breezy tonight with periods of rain. Lows, lower 50s. Cloudy, mild, increasingly windy & occasionally wet on Wednesday. Wet & windy with another night in the 50s Wednesday night.

Frost Discussion: An offshore low, with a nice tap into subtropical moisture, will direct this dense cloud cover inland across a wide swath of California. This will keep the Lodi area cloudy and increasingly breezy tonight while directing waves of mainly light precipitation across the region. The overnight hours are expected to be wetter than the evening for most regional locations with rainfall more significant for locations near the Sierra Nevada foothills. Not surprisingly cold spots area unlikely to reach 50F tonight. The Lodi area should remain cloudy tomorrow while becoming even windier with most of the region left to the north of the more significant precipitation. No location will cool below mid 50s tomorrow night as cloudy, breezy & periodically wet weather continues.

LODI AVA FORECAST MINIMUM TEMPERATURES

Forecast minimums for key regional locations	Most Likely Minimum for tonight	Worst Case Scenario Clear & Calm	Afternoon Observations & 24hr change		Today's AM Minimum Temperature	Change from previous nights Min Temp	Rainfall Today So Far
			Temperature	Dew Pt			
AVA's		5%					
Lodi West AVA	52	40	55 -4	-- --	47.0	+14.1	0.04
